*You will find
all
the universe in
a piece of land...*

“ALABANIA”
a piece of
universe”

Blessed with a Smart Youth

A young country where the average population age is 30 years old. Fully educated youth, vital and eager to work.

Blessed with the gift of life

“Good” water...

2nd biggest water source in Europe

Energy

Drinking water

Fish

Tourism

Blessed

with approx. 300 sunny days

Solar energy potential up to 1.9 GW

A row of white wind turbines stands on a green field. The sky is a vibrant green, suggesting a strong wind or a digital effect. The turbines are arranged in a line, with the central one being the largest and most prominent.

Blessed with winds...

speeds @ 3.3-9.6 m/s

Albania has an untapped wind power potential 2.15 GW, in particular along the Adriatic and Ionian coasts.

**Blessed with the reflection of the
blue sky in magical seas of the
Ionian and Adriatic coasts...**

-300 km of untouched beaches

Coast

Nature, Eco, Rural

Cultural and Heritage

Blessed with fertile soil, livestock and traditional organic products...

43 % of Arable Land

Agriculture has traditionally been the backbone of Albania's economy and remains one of the largest and most important sectors in Albania.

Blessed with rich Mineral resources...

***Top Minerals: Chromite
Iron-Nickel
Copper
Bitumen
Coal***

OIL & GAS

*Blessed with oil and gas reserves.
Albania among Balkan countries is rich in oil
and gas reserves in Adriatic and Ionian coast
and sea.*

3 billion barrels of oil reserves
5.7 billion m³ natural gas reserves

Albania government aims to transform the “Made in Albania” brand into a certified and reliable bio and organic food brand in the international markets.

Albania offers a set of enablers for innovative agriculture investors

Albanian government support measures include regulations, tax structure, competitive and low-cost labor force and investment incentives.

By **2050** world population is projected to increase to **9 Billion** and by the same time it has been estimated that as much as 50% of the world's arable land may be unusable.

A young girl with long brown hair, wearing a white tiered dress, white and grey striped tights, and black shoes, stands with her back to the camera in a grassy field. The background is a soft-focus landscape with trees and a bright sunset or sunrise sky, creating a warm, golden glow.

China and the Gulf Countries are already looking at purchasing land in other countries in order to feed their own populations.

It may well be time for us all to look at the consequences of nationalizing productive land in order to ensure an equitable distribution of food.

Only those who live on the island are well aware of the asset value of the land.

“If you can imagine it, you can print it!”

Emerging economies need to co-operate with those economies, which will plant in the "land of the mind" their imagination creativity, experience, knowledge, technology transfer and all innovations that will grow in that ecosystem.

A young girl with long, curly hair, wearing a white tiered dress, white and grey striped tights, and black shoes, stands in a field. She is looking towards the horizon where the sun is setting, creating a warm, golden glow. The background is filled with trees and foliage, some of which are illuminated by the low sun.

It is a blessing for the country that shall create the first model of TIEDA (Technology, Innovation, Economic, Development Area).

We want **to plant the matured ideas and** already proven from countries that have put their **imagination into practice.**

We are all important pieces of the puzzle in our universe...

“The true sign of intelligence is not knowledge, but imagination.”

Albert Einstein

impact**

***We approach a visionary project to those who
under the symphony of sun, water, sea and wind
are able to design and grow futuristic and
functional business models.***

“GlobAlb” TIEDA concept

An aerial rendering of a futuristic urban development. The central focus is a large, circular stadium-like structure with a prominent, rounded, metallic-looking dome. The stadium is surrounded by lush greenery and modern buildings. In the background, a city skyline is visible under a clear sky. The overall aesthetic is clean, modern, and technologically advanced.

Construction, development, maintenance and operation of the Technological Innovation and Economic Development Area “TIEDA”.

“If we can imagine it, we can do it!” Concept

We imagine an ecosystem and be part of the global innovation, commerce, finance, communication and transport hub.

Albania aims to be part of "technology-ready" nations and important International-meetings center offering the best investment potential opportunity.

We seek to be a competitive country and part of the foreign exchange market and financial center. We seek to be an important regional oil and gas and trading center, and important container port services in the region.

We seek to build TIEDA models comparable to those of tax haven for strategic investors. **We seek to rank better in the level of Human Development.**

We seek to be ranked highly in education, healthcare, life expectancy, quality of life, personal safety, and housing, with better level of democracy, and environmental performance and sustainability. We seek to transform on **a multi-language nation.**

We seek to be **an education hub** in the region and Information, communications technologies and innovation **to be the core pillars** of the Albanian economy.

We seek to cooperate with those nations which have incorporated all these advantages in the character **of the nation's brand**.

A young girl with long, curly hair, wearing a white, tiered dress and striped tights, stands in a field at sunset. She is looking towards the horizon, where the sun is setting behind a line of trees. The sky is a mix of orange, yellow, and blue, with some light rays visible. The overall mood is contemplative and hopeful.

We seek a visionary partner to build a free technological economic zone, wherein shall be transferred the knowledge incorporated in their technology, and innovation.

We imagine our future of globalization as responsibility to develop the human capital of the country to become “Tech-Ready Nation”.

We are proud to provide the best conditions in exchange of your assistance to create in our country a physical model of what you represent as a “Tech-Ready” economy and nation.

We are absolutely clear that the shortest way is to **learn by building the future.**

Times have changed. The transfer of knowledge is in our smartphone.

We have no time to lose on what is written in several libraries and digital information... as it will always lack something, a functional model or a prototype.

Those who have built the functional model know how to build it once again. We understand the need for accomplishing the above.

We are proud to offer the opportunity, wherein you can enjoy the privilege to build the TIEDA model, by transferring knowledge and experience embedded in human capital, technology, products, and unique services.

This is our appreciation after being tempted to hear from you a visionary “Yes” for a mutual cooperation.

We all live in the same house... It is called Planet Earth.

Thank You
